

Pultra PTA 10 Watch Lathe

This is an 8mm watchmaker's lathe made by Pultra Ltd., Manchester, England.

Although called a Model 10, it is actually an 8mm lathe as determined by the collet size.

For illustration purposes only

The lathe comprises:

Bed - 10" hardened & ground of the D-section Geneva style (which is compatible with Lorch lathes)

Headstock which takes standard 8mm spring collets, driven by a 3-step indexing pulley (24 hole) and sprung detent

Collet drawbar

Tailstock with male and female centred double ended runner

Handrest – tilting with bed clamp and 'T' rest

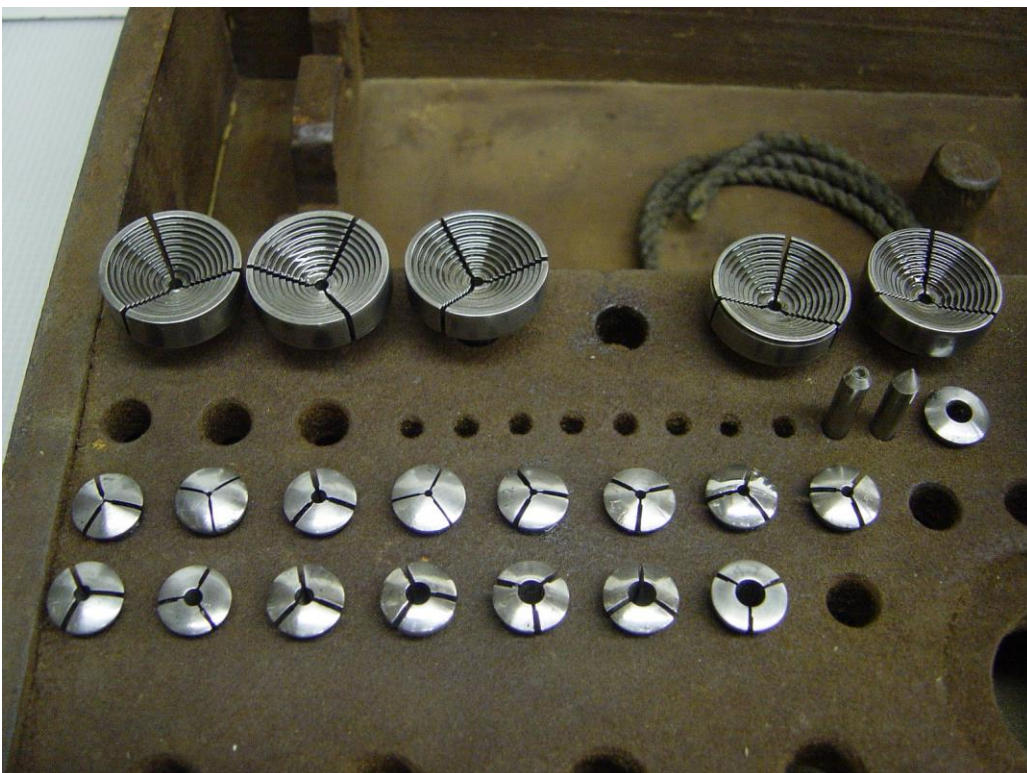

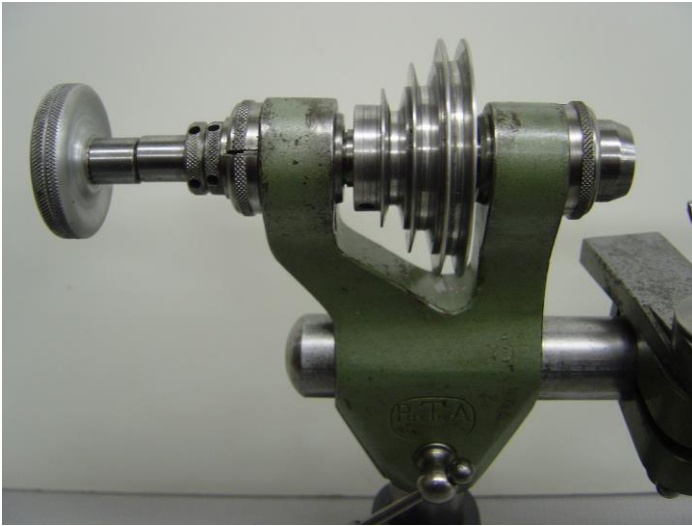

Bench mounting lathe stand

15-off Conflex 8mm collets

Set of 5 external step chucks

Taper bore collet including male & female centres

Fitted wooden storage case

This is a nice example of a sought after watchmaker's lathe with a good selection of equipment all in the manufacturer's fitted wooden case. The lathe has been stripped, cleaned and adjusted. The spindle bearings are in excellent condition. Generally, the lathe is in good condition with only minor age related marking from damp storage at some time.
